SUMMARY

Computer Science student and software engineering practitioner with hands-on experience delivering full-stack banking applications across frontend, backend, databases, and middleware, alongside applied AI systems. Published researcher in time-series forecasting with additional experience in LLM evaluation, API security, and production-oriented troubleshooting.

EXPERIENCE

PT Bank Hibank Indonesia
IT Developer Intern – Tech Modernization / Middleware Development (February 2026 – Present)

- Developed full-stack modules for a digital banking Biller Management platform across relational databases, backend services, and web interfaces, covering supplier products, fees, roles, parameters, transaction mappings, authentication, and CRUD workflows.
- Built and maintained RESTful middleware services and third-party biller integrations using C#/.NET, PHP, and Java/Spring-based services; performed request/response mapping, API testing, log analysis, and database validation across banking flows.
- Designed ERDs, SQL Server schemas, and relational join/service-layer logic to consolidate interconnected product, supplier, customer, and configuration data for application-facing APIs.
- Developed internal Human Capital applications including AI-assisted CV screening, Recruitment Tracker, Internal Job Posting, and SK/Letter Generator from requirement analysis and database design through backend/frontend implementation, debugging, and functional testing.
- Supported legacy mPOS and middleware modernization through TID, response-code, and channel mapping; deployment/routing/rollback support; SOA High Availability documentation; and exposure to Solace event-driven architecture.

DataAnnotation.tech
Freelance AI Evaluator & Prompt Engineer (March 2026 – Present)

- Evaluate LLM outputs through RLHF-style workflows with emphasis on coding quality, logical reasoning, factual accuracy, and instruction following.
- Design multi-turn prompts and edge-case evaluations, producing structured annotations and feedback to improve model reliability, alignment, and safety across technical domains.

Aula Simfonia Jakarta
Independent Security Researcher (March 2026 – April 2026)

- Discovered and responsibly disclosed a payment-bypass business-logic flaw and an IDOR vulnerability in an e-ticketing backend API, identifying missing server-side payment and authorization validation.
- Authored a reproducible Postman-based PoC and remediation guidance, supported patch verification, and received official acknowledgment and a security reward.

RESEARCH & PUBLICATION

Hybrid Ensemble Model Approaches for Stock Price Forecasting using LSTM, Random Forest, ARIMA, and Linear Regression as Meta-Learner
Procedia Computer Science (Elsevier), 2025; presented at ICCSCI 2025.

Selected AI work: YOLOv8-based computer-vision system for agricultural disease detection; applied generative-AI and LLM evaluation projects using Gemini API, Hugging Face, and RLHF workflows.

EDUCATION

BINUS University – Kemanggisan, Jakarta (2023 - 2027)
Bachelor of Computer Science (Intelligent Systems)

SKILLS

Languages: Python, Java, C#, PHP, JavaScript (ES6+), SQL
Frontend: JavaScript (ES6+), HTML/CSS, Tailwind CSS, responsive web UI, CRUD interfaces
Backend & Data: C#/.NET, Spring Boot, PHP, RESTful APIs, SQL Server, relational modeling, ERD, SOA/middleware integration
AI & ML: TensorFlow, scikit-learn, Hugging Face, Pandas, NumPy, Gemini API, LLM evaluation/RLHF, YOLOv8, time-series forecasting
Tools: Git, GitHub, Postman, Swagger/OpenAPI, DBeaver, Google Apps Script, Figma, Solace PubSub+
